The NEW Power Pix Cameras are CMOS cameras with ultra strong Wide Dynamic Range Capabilities, allowing the camera to capture crystal clear images in very harsh lighting environments without losing details or color

DNR (Digital Noise Reduction)

Provides clearer images using a unique algorithm designed to reduce electronic noise while preserving the image's clear details in low light video.

Smear Cancellation

Smear Cancellation adjusts the camera's exposure to the bright light to make sure all the details in the view are clear and visible.

Powerful WDR for Overexposure

Power Pix cameras correct overexposure in outdoor scenes to capture all the details in the bright areas of the Field of View.

Power WDR for Underexposure

Power Pix cameras correct underexposure in indoor scenes to capture all the details in the dark areas of the Field of View.

Summary

Our WDR CMOS Series is our new ultimate Wide Dynamic Range camera line equipped with a powerful CMOS sensor chip, offering the most powerful Wide Dynamic Range feature in the market. The cameras are perfect for any project where cameras face harsh lighting conditions, with very dark and very bright areas in the same field of view. By capturing the dark and bright areas separately and then interlacing the image, you are able to utilize one camera to view all the details in complex Fields of View.
