Digital Watchdog® and SureView Partnership Gives Eyes to Alarm Systems

Tampa, FL (August 5, 2014) – [Digital Watchdog](#) (DW), the industry leader in digital recorders, surveillance cameras and related management software, has announced expanded support for integrated security applications by partnering with SureView Systems.

Digital Watchdog's complete analog video surveillance solutions have been leading the market in reliability and ease of use for more than a decade, offering customers the best image quality, recording solutions with abundant analytical features and proven data security. SureView's Immix® is rapidly becoming one of the most popular central management software on the market. While DW's analog solutions are a great embedded recording solution, Immix provides customers the ability to merge the popular VMAX Digital Video Recorder Series with video and alarm central monitoring software.

DW's VMAX Digital Video Recording (DVR) solutions are advanced H.264 embedded recorders that can record real time video in resolutions from CIF to 960H quality. The DVRs offer dynamic features such as local quick search and playback, single touch playback and backup, quick setup guide with remote and FTP firmware upgrade, all managed from a simple and user-friendly local graphical user interface (GUI). The first generation of VMAX DVRs revolutionized the market by offering these powerful features, tailored to meet the end-user's expectations, giving them the power to control their investment and get the most out of their surveillance systems. Taking everything we've learned from the first generation, DW recently released the VMAX960H series, offering all the popular features of the 1st generation VMAX with higher

resolution capabilities and additional features such as 5x signal extender, single channel playback during live view, and true DVR health check and monitoring. By partnering with SureView, and integrating the VMAX recording solutions with the Immix central monitoring and command center, our customers can have the added value of controlling and monitoring their VMAX solutions from a unified, single central monitoring station.

Immix CS & CC are used by central stations and command centers to deliver next generation monitoring services, reducing operational costs and delivering new end user services effectively. Immix accomplishes these goals by consolidating video, access control, audio and alarms creating a single point of management and operation. Immix is a web-based service delivering new options for deployment, powerful support for mobile applications and entirely browser-based user workstations. Immix offers an open architecture platform with the largest integration library in the business built upon proven, certified scalable technology.

About Digital Watchdog

Digital Watchdog (DW) is a leading manufacturer of value-driven complete surveillance solutions. DW products include technologically-advanced features including wide dynamic range (WDR), Star-Light™ super low light technology, Omni-Plus™ autofocus systems, Smart DNR digital noise reduction and Smart IR infrared illumination. Complete analog surveillance solutions include VMAX™ digital video recorders (DVR), mobile management applications, 960H and HD-SDI cameras. Complete IP megapixel surveillance solutions include Blackjack™ network video recorders (NVR), DW Spectrum™ video management system (VMS) for server, mobile and on-camera control, MEGApix™ cameras and edge camera systems. Digital Watchdog is a single-source provider of complete surveillance solutions for any application.

About SureView Systems

SureView Systems is the leading developer of video-based automation platforms for the security alarm industry. It owns, develops, sells and supports Immix™, a video centric software platform designed to receive alarm events from video, video analytics, access control, automation systems and GPS location aware devices. With offices in the UK and the USA, SureView Systems supplies systems to some of the largest commercial monitoring stations, guarding companies and corporate organizations running their own control centers. All systems are UL Certified in the USA and BS8418 compliant in Europe.
