

DW TECH BULLETIN

DOC#: DW05192011

Distribution: Internal and External

May 19, 2011

subject: DWDDNS.Net Connection

When using DWDDNS.net, TCP (Transmission Control Protocol) and UDP (User Datagram Protocol) are required to establish a connection between the VMAX480 DVR and the ACS or Pivot CMS Software.

Users can either port forward Port 9010 and Port 80 using both protocols TCP and UDP or make sure UPnP and NAT Traversal are checked in the VMAX480 setup menu.

DVR Registration

Name	VMAX480 Demo	
IP Address or URL	vmax480demo.dwddns.net	Search
