September 27, 2011

subject: ACS and CMS Update

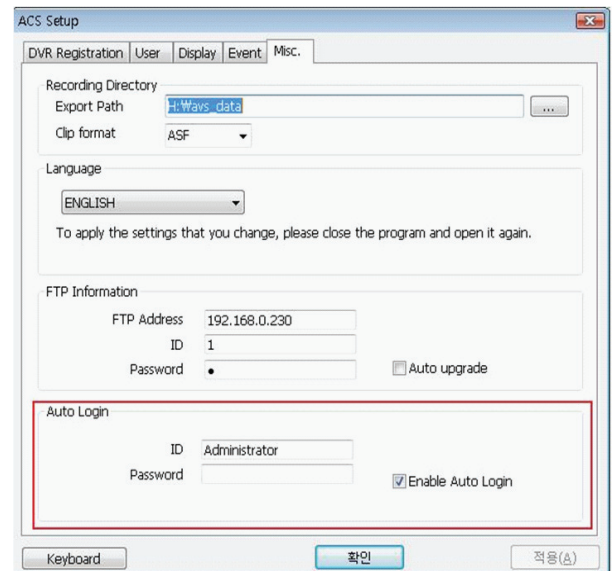

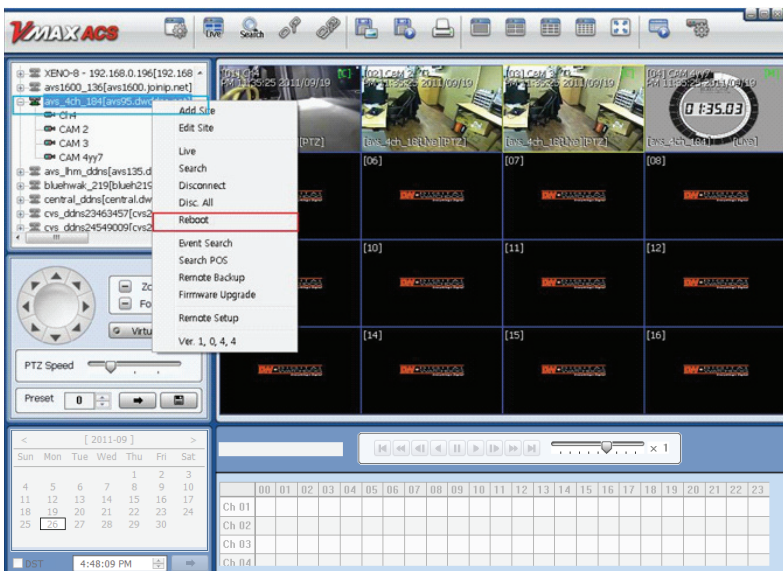

Digital Watchdog is proud to announce three key features that have been added to our Advanced Client Software (ACS) and Central Monitoring Software (CMS). Now, users can reboot their VMAX480 from a remote location using ACS and CMS. The newest version will also display the date and time settings at the initial boot up and allow users to set automatic logins. If the Auto Login feature is enabled, users can skip the login procedure and begin viewing live video immediately.

Please note that the VMAX480 needs to be upgraded with the latest firmware in order for the two functions to work properly.

Firmware Version: 99.2.0.1.51

ACS Version: 1.0.4.4

CMS Version: 1.0.4.4
